

Integrate Accuvax or BD Pyxis with your NextGen System

Optimize Your Workflow for Medications and Immunizations

Accuvax Bi-directional interface with NextGen

Our Accuvax interface sends immunization orders from NextGen to Accuvax. This eliminates the need to enter orders into both the EHR and the device. Errors in dispensing are also reduced as the order for the correct immunization is already in the device as the time of dispensing. Updates are sent back to NextGen including manufacturer, lot numbers, Medication expiry date, and NDC information.

BD Pyxis Bi-directional interface with NextGen

Our BD Pyxis interface sends demographics and immunization or medication orders from NextGen to BD Pyxis optimizing the workflow and reducing the possibility of errors. Updates are sent back to the NextGen system including Medication expiry date, and NDC information.
