Submit CPT Charges to PM with Diagnosis Codes Populated

The eMedApps Diagnosis Automator works hand in hand with NextGen's Coded Results Mapping template (introduced in version 5.9.2020.1). The Diagnosis Automator allows you to map ICD codes to the relevant CPTII codes so that charges may be submitted to PM automatically with both the CPT and ICD codes populated. This time-saving tool puts you in the driver's seat as you select up to four diagnosis codes to be mapped to each CPTII code. Customize the solution further by indicating measures that need to be reviewed on a case-by-case basis. Take workflow automation to the next level with the Diagnosis Automator.
